

JAZE ACCESS MANAGER

Jaze Access Manager enables enterprises and large campuses to authenticate users on the network and enforce identity based policies to provide a complete BYOD solution.

KEY FEATURES

- Vendor agnostic solution
- Enterprise-class 802.1X authentication
- Self-Registration for User Onboarding
- Multiple user datastore support
- Integration with external third-party LDAP servers
- One-time device setup
- Inbuilt SMS and Email integration
- BYOD - Bring Your Own Device
- Identity Based Policy Enforcement
- Bandwidth and Usage management
- Auto-discovery of Access Points
- Interoperates with existing network infrastructure in all topologies
- Intuitive user interface
- Live Monitoring of current users, traffic and usage statistics
- Logging & Reporting - for analytical, legal and audit purposes

STEP 1: SELF REGISTRATION

New users are redirected to a custom self-registration page where user details and device information are automatically collected. Upon approval the username and password is sent by SMS and E-mail to the user.

STEP 2: DEVICE ONBOARDING

Our unique Xpress Setup Tool helps configure user devices for 802.1X enterprise security and authenticate against the local user database or external LDAP servers.

STEP 3: POLICY ENFORCEMENT

Our Identity-based policy management engine helps enforce bandwidth, time, data-usage as well as device based policies.

STEP 4: MONITORING & REPORTING

Our feature rich monitoring dashboard with live traffic and usage graphs enables you to get detailed insights on the usage and activity of the users and devices on your network.

PRODUCT OVERVIEW

Vendor Agnostic Solution

Designed to work with networking equipment from any vendor with support for both controller based and standalone APs.

Identity Based Policy Enforcement

Enforce user-based policies to control the Bandwidth, Data Usage and Time Limits for each user on the network.

Bring Your Own Device

Our enterprise class BYOD engine lets you manage and enforce identity based policies on the devices in your network.

SMS and Email Integration

Inbuilt integration with our cloud based SMS Gateways and E-Mail servers to the simplify registration process.

Auto Discover APs

Scan for Standalone Access Points on your network and monitor them in a centralized manner.

Flexible deployment options

Works in both layer 2 and layer 3 topologies and along with existing network infrastructure servers.

Monitoring and Reporting

Get detailed insights on the usage and activity of the users and devices on your network from a single dashboard.

Self-Registration for User Onboarding

Customizable workflows to help users request access and create an account helping reduce IT administration costs.

802.1X Authentication

Enterprise grade network security through standards based 802.1X RADIUS based authentication and accounting.

Multiple User Database Support

Support for datastores such as Windows Active Directory, Novell Directory Service, OpenLDAP and Local User Database.

One time sign-in

One time device setup with the Jaze Xpress Setup tool enables ease of access without the need to sign-in again.

Centralized management

Centrally manage and monitor all users and devices on your network from a single dashboard.

Flexible customization

Customizable workflows for user onboarding with options to suit a variety of use cases.

Zero OPEX

Zero operational expense resulting in huge cost benefits in terms of IT and network administration.
